Fundamentals Of BLS For Healthcare Providers

Synopsis

From the American Heart Association. Updated with AED use for children. This text covers the same information for healthcare professionals as the BLS for Healthcare Providers text, but in a simpler format with less medical terminology for persons who have less advanced medical backgrounds. It includes information on adult and pediatric CPR (including two-rescuer scenarios and use of the bag-valve mask), foreign-body airway obstruction (both for conscious and unconscious victims), automated external defibrillation, special resuscitation situations, and other cardiopulmonary emergencies common to healthcare providers.

Book Information

Paperback: 156 pages

Customer Reviews

This book goes along with the classroom training and video which is required for most CPR licensing. However, this book is very informative to learn basic techniques on your own even if you do not plan on taking the licensing test. This is a must-have for any healthcare professional or anyone with children and elderly friends & family.

I was pleased with the condition of this book. I was also very pleased at how quickly it was sent. I am looking forward to my BLS/CPR class next semester. Thank you for your services. D :)

Great book for what it cost.
